Switch and Save!
MailStore Server Competitive Upgrade

There are plenty of reasons to choose MailStore Server, so we decided to present customers who already use an email archiving solution from another company with an attractive offer. We are offering a special, one-time discount of 50 percent to first-time customers of MailStore Server if they purchase and install it to replace a competitor's product. Naturally, the purchase price also includes the first year of update and support services.

Requirements

- Every license for an email archiving solution from another company qualifies the license holder for a competitive upgrade.
- Licenses for backup solutions or integrated archiving modules (for example, from email servers) do not qualify the license holder for a competitive upgrade.
- With the competitive upgrade, the purchase of MailStore Server includes a maximum of one year of update and support services. Additional years can be purchased as usual after the upgrade.
- MailStore Server must be licensed for the same number of users as the original solution. However, you can purchase additional licenses at any time after the upgrade.
- The maintenance contract for the original solution cannot have expired more than six months ago.

Ordering

Please contact your local MailStore sales partner and include a copy of your proof of license. Your MailStore sales partner will then provide you with an individual quote. Our customer service team (sales@mailstore.com) will be glad to help you find the right sales partner.

50% Discount

How does switching benefit you?

Unlike other companies, MailStore specializes exclusively in the development of email archiving solutions. The company and its employees focus all of their energy on the ongoing improvement and upgrading of MailStore's products.

- More than 10,000 companies of all sizes across all sectors rely on MailStore Server
- Integrated storage technology for any number of users or any volume of data
- For virtually all email systems and archiving methods
- Fast and easy access for end users, even on mobile devices like tablets and smartphones
- Low costs, minimal system requirements, and intuitive to use
- Versatile export function guarantees independence over the long term, even from MailStore Server
